SUMMARY

Data Analyst and aspiring Data Scientist with hands-on internship experience delivering end-to-end analytics pipelines, predictive ML models, and AI-powered tooling across marketing and consulting sectors. Skilled in Python, SQL, and cloud data platforms (GCP BigQuery, dbt), with a strong mathematical foundation from UC Santa Cruz applied to real-world data problems.

PROFESSIONAL EXPERIENCE

4P Consulting — Atlanta, GA (Remote) *Sep 2025 – Present*

Data Analyst Intern

- Built an AI-powered resume matching pipeline (spaCy + Ollama) ranking 50+ candidates against any job description in <10 min — cutting screening time by 85% with ~92% agreement with human reviewers.
- Designed and maintained relational databases managing candidate profiles, hiring stages, and placement outcomes; performed EDA and trend analysis to improve recruitment pipeline efficiency.

H\L Agency — Oakland, CA (Remote) *May 2025 – Aug 2025*

Data Analyst Intern

- Cleaned and validated large-scale campaign datasets using Python, SQL, and GCP BigQuery; built dbt models to standardize pipelines and deployed Power BI and Tableau dashboards surfacing real-time campaign KPIs.
- Built automated Python and dbt reporting workflows to detect trends and anomalies, reducing manual effort and accelerating delivery of actionable insights across multiple client accounts.

PROJECTS

HR Analytics — Employee Turnover Prediction | *Python, scikit-learn, XGBoost, pandas, Seaborn*

- Compared four ML models (Logistic Regression, Decision Tree, Random Forest, XGBoost) on a 15K-row HR dataset, achieving 0.99 ROC-AUC with XGBoost; identified key churn drivers via feature importance and delivered stakeholder-ready retention recommendations.
- Conducted full EDA uncovering critical patterns — turnover peaks at 2–4 year tenure, bimodal overwork/underwork effect, and department-level risk clusters in Sales and Technical teams.

AI-Powered Resume Matching Pipeline | *Python, spaCy, Ollama, FAISS, Streamlit, asyncio*

- Engineered a hybrid NLP + LLM scoring pipeline ranking 50+ resumes against any JD in <10 min; YAML-driven weighting, LLM fallback routing via Ollama, and 14× throughput improvement via async batch processing.
- Built a Streamlit UI with interactive results filtering, per-candidate CSV/Excel requirement matrices, and configurable advance/review/reject score thresholds.

Short-Form Video Engagement & Retention Dashboard | *Python, PostgreSQL, Streamlit, Power BI*

- Designed a PostgreSQL schema for session-level engagement data; built funnel and 7-day retention KPI reporting in Streamlit and Power BI, mirroring a real product analytics workflow end-to-end.

Replayd — Letterboxd for Sports | *Next.js 14, TypeScript, PostgreSQL, Supabase, Tailwind CSS*

- Designed and built a full-stack web app for logging, rating, and reviewing football matches across 6 top leagues — featuring PostgreSQL schema design with raw pg queries (no ORM), Supabase Auth with SSR, and an automated GitHub Actions cron pipeline syncing live match data from football-data.org.
- Implemented a CI-tested component system (Vitest + Testing Library) and App Router architecture in Next.js 14 with TypeScript, following production engineering practices from authentication to data refresh.

EDUCATION

University of California, Santa Cruz — Jack Baskin School of Engineering *Graduated Mar 2025*

B.S. Mathematics — Theory and Computation | Minor: Computer Science & Statistics

Relevant Coursework: Data Structures & Algorithms, ML: Data Analysis & Empirical Methods, Probability Theory, Statistics, Discrete Math, Advanced Linear Algebra, Real Analysis, Computational Methods, Graph Theory, Computer Systems (C/Assembly)

CERTIFICATIONS

Google Advanced Data Analytics Professional Certificate — Coursera

Anthropic Model Context Protocol (MCP) — Anthropic

SKILLS

Languages: Python, SQL, TypeScript, R, C, C++, HTML/CSS

ML & Analytics: pandas, NumPy, scikit-learn, XGBoost, spaCy, FAISS, Matplotlib, Seaborn, SciPy, Statsmodels, MCPs

Tools & Platforms: Streamlit, Next.js, FastAPI, dbt, PostgreSQL, GCP BigQuery, Supabase, Tableau, Power BI, Git/GitHub, Linux/Unix

Concepts: Statistical Modeling, Predictive Analytics, NLP, ETL Pipeline Design, EDA, A/B Testing, BI Reporting
